

SAT-GF

Divisible conduit connection for braided conduits

The SAT-GF provides seamless protection and therefore increases the service life of the cables. It fixes the end of a braided conduit, prevents fraying and allows subsequent fastening without tools. For mounting on the control cabinet, the user has the option of inserting the SAT-GF into a conduit fitting (e.g. m-fix) or placing it into a universal holder (e.g. UHE).

SAT-GF

Divisible conduit connection for braided conduits

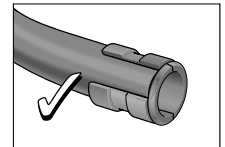

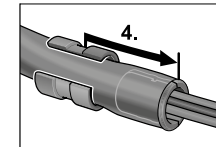

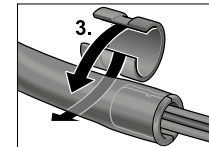

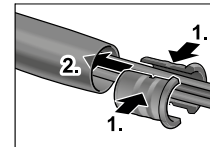

Properties that impress:

Perfect end piece of the braided conduit

The SAT-GF prevents the conduits from fraying and fully and securely protects cables from wear and damage.

Subsequent assembly

Due to the two-piece inner sleeve and the slotted outer sleeve, it is also possible to subsequently install cables with connectors without using tools.

Fastening option I: Conduit fitting m-fix

The SAT-GF can be inserted into a conduit fitting with the braided conduit and cables. For perfect cable routing, we recommend the m-fix series.

Fastening option II: Conduit holder UHE

For improved fixation or stable routing of the cables, we recommend the UHE conduit holder series, which perfectly complements the SAT-GF in the application.

Approvals:

EN 45545-2 3xHL3

Fire classification UL94: V0

NFPA 130

• ASTM E 162

• Boeing BSS 7239
